DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-13, drawn to an aneurysm bypass system, classified in class 623, subclass 1.35.
 - II. Claim 14, drawn to an extension stent-graft, classified in class 623, subclass 1.13.
 - III. Claims 15-16, drawn to a method of implantation, classified in class 623, subclass 1.23.
 - IV. Claims 17-18, drawn to a connector, classified in class 623, subclass 1.36.
 - V. Claim 19, drawn to a kit, classified in class 623, subclass 1.11.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I. and III. are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product may be assembled before delivery and delivered at the same time, rather than one after the other.
3. Inventions I. and II. are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because any encasing prosthesis smaller than the vessel wall may relieve pressure from an aneurysm, the prosthesis need not be a stent-graft with an anchor. The subcombination has separate utility such as repairing any collapsed vessel or use as an anastomosis.
4. Inventions II. and IV. are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable.

Art Unit: 3738

In the instant case, invention IV. has separate utility such as connecting a spinal end plate to a spinal core or connecting a heart valve to a stent. See MPEP § 806.05(d).

5. Inventions I. and V. are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation and different functions. Invention V. is for use as a modular kit, which functions to supply a variety of materials for use that may be selected and assembled before delivery.

Invention I. is an aneurysm repair device which functions to maintain a vessel, and may be delivered by means other than a catheter tip, such as by a sheath or invasive techniques, also does not require any attachment devices as in Invention V.

6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
